## USERS' GUIDE

### Catalog Arrangement and Indexes

The bibliographic entries in the *Monthly Catalog* are arranged in Superintendent of Documents classification number order. Each record is also assigned a unique catalog number, which consists of a two-digit prefix representing the catalog year, followed by a sequential number beginning with 1 in the first issue of each year. Within this arrangement, the publications of each Government author are further identified by the name and address of the issuing agency.

Catalog entries may be accessed by the following indexes:

**Author index:** An alphabetical list of personal authors, editors, co-authors, corporate authors, and conferences.

**Title index:** An alphabetical list of titles proper, subtitles, and alternate titles.

**Subject index:** An alphabetical list of subjects derived from the *Library of Congress Subject Headings*.

**Series/Report index:** An alphabetical listing of series statements and tracings, series numbers, and report numbers.

**Contract number index:** An alphanumeric list of contract, grant, and project numbers associated with technical report publications.

**Stock number index:** An alphanumeric list of Superintendent of Documents and other sales stock numbers.

**Title keyword index:** An alphabetical list of truncated titles, arranged by important words selected from publication titles.

A **margin index** on the back cover locates the seven indexes. Listings in all of the indexes are followed by the catalog entry number, which refers the user to the complete bibliographic citation. Listings in the **title** and **subject indexes** are augmented with the publications' author and classification number to enhance identification and retrieval. Cumulative indexes are published semiannually, annually, and quinquennially, and in addition the indexes listed above, include a **Classification number index** for all the publications listed during the period of cumulation.

### Abbreviations

The abbreviations used in the bibliographic records in the catalog are those described in the *Anglo-American Cataloguing Rules*, 2nd ed., and the *GPO Classification Manual: A Practical Guide to the Superintendent of Documents Classification System*.

### List of Government Authors

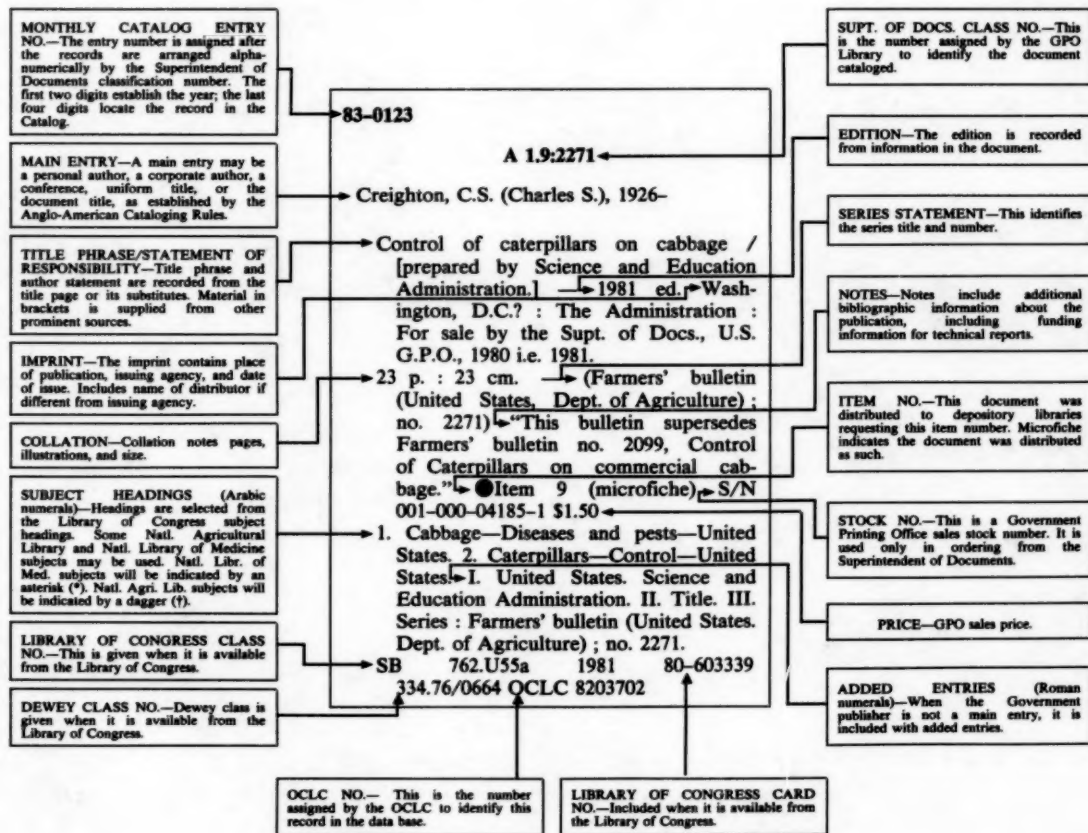

This alphabetical list in the preliminary pages of each catalog locates the beginning of the sequence of entries of documents issued by a specific agency. The list is compiled each month and contains only Government authors of documents included in that *Monthly Catalog* issue.

## SAMPLE ENTRY

*Monthly Catalog* descriptive cataloging entries follow the precepts of the *Anglo-American Cataloguing Rules*, 2nd ed., 1988 revision, the Library of Congress Rule Interpretations, the *GPO Cataloging Guidelines*, and the several pertinent OCLC format documents. All name and series authorities are in AACR2 format, and are established through the Library of Congress Name Authorities Cooperative Project (NACO). The subject headings used in the GPO cataloging are derived from the *Library of Congress Subject Headings*, 11th ed.

The following sample entry is an artificial, composite record, designed to illustrate the major features of a *Monthly Catalog* bibliographic citation.

# THEORY

The first part of the theory is the definition of the system. The system is defined as a set of elements that are connected by a set of relations. The elements are represented by nodes and the relations are represented by edges. The system is then analyzed by looking at the properties of the nodes and the edges.

The second part of the theory is the definition of the system's behavior. The behavior is defined as the set of states that the system can be in. The states are represented by nodes and the transitions between states are represented by edges.

The third part of the theory is the definition of the system's structure. The structure is defined as the set of components that make up the system. The components are represented by nodes and the connections between components are represented by edges. The structure is then analyzed by looking at the properties of the components and the connections.

The fourth part of the theory is the definition of the system's dynamics. The dynamics are defined as the set of rules that govern the system's behavior. The rules are represented by nodes and the transitions between rules are represented by edges. The dynamics are then analyzed by looking at the properties of the rules and the transitions.

The fifth part of the theory is the definition of the system's control. The control is defined as the set of actions that can be taken to change the system's behavior. The actions are represented by nodes and the transitions between actions are represented by edges. The control is then analyzed by looking at the properties of the actions and the transitions.

The sixth part of the theory is the definition of the system's optimization. The optimization is defined as the set of methods that can be used to find the best solution to a problem. The methods are represented by nodes and the transitions between methods are represented by edges. The optimization is then analyzed by looking at the properties of the methods and the transitions.

The seventh part of the theory is the definition of the system's simulation. The simulation is defined as the set of techniques that can be used to model the system's behavior. The techniques are represented by nodes and the transitions between techniques are represented by edges. The simulation is then analyzed by looking at the properties of the techniques and the transitions.

The eighth part of the theory is the definition of the system's verification. The verification is defined as the set of methods that can be used to check the correctness of the system's behavior. The methods are represented by nodes and the transitions between methods are represented by edges. The verification is then analyzed by looking at the properties of the methods and the transitions.

The *Out-of-Print GPO Sales Publications Reference File* provides users with access to historical records for publications which were once available through the Sales Program. Two 6-year cumulations have been produced. The first was published in 1980 and is known as the Exhausted GPO Sales Publications Reference File (EPRF). It includes 25,000 items which went out-of-print at GPO between 1972 and 1978. The second, known as the Out-of-Print PRF (OPRF), was published in 1986. It contains 35,000 titles which went out-of-print between 1979 and 1984. The EPRF and the OPRF continue to be supplemented each year. Supplements are sold annually and will cumulate until a third 6-year set is available in 1992.

Copies of publications listed on the EPRF and the OPRF may be found in regional depository library collections. Copies of certain technical publications no longer sold by the Superintendent of Documents may be available from:

## THEORY OF THE EARTH

The theory of the earth is a branch of geology which deals with the origin and development of the earth and its various parts. It is a science which seeks to explain the processes which have shaped the earth and its features. The theory of the earth is based on the study of the earth's history and the changes which have taken place in its structure and composition. It is a science which is constantly developing and changing as new discoveries are made and new theories are proposed.

## FEDERAL DEPOSITORY LIBRARY PROGRAM

The Federal Depository Library Program was established by Congress to provide free public access to Government publications. Nearly 1400 public, academic, State, and law libraries serve as an information link with the Federal Government by maintaining collections of Government publications. These collections, which are tailored to local needs, are open to the public. Fifty-four of the libraries are designated as regional depository libraries. They have the responsibility of retaining material permanently and providing inter-library loan and reference services in their regions. They also assist the other depository libraries with the disposal of obsolete material.

Copies of documents no longer available through the GPO Sales Program can usually be found in regional depository collections. A complete listing of regional depositories follows. To obtain a complete listing of all depository libraries, write to:
